

Learning Engineering for Next-Generation Systems

Capability *Matters*

Case Overview

A quick-reference guide to one hundred real cases — each with a brief callout, its key sources, and the LENS courses it informs.

Capability Matters

OVERVIEW

The companion digest to the casebook: one hundred cases of capability — how it fails, how it has been engineered, and where the discipline is being tested next.

Each entry distills a case to its essentials — title, a brief callout, one to three key references, and the LENS courses it informs — with the full three-page treatment in the main casebook. A companion to the Learning Design and Technology program and the Learning Engineering for Next-Generation Systems specialization at the Johns Hopkins University School of Education.

ONE HUNDRED CASES · SIX FAILURE MODES · ONE DISCIPLINE
